

Are Your Inspection Rounds Delivering Real Value to Your Business?

Every day, your field operators inspect enterprise assets and equipment and observe machine performance, enabling plant managers to monitor asset health and detect technical issues or damages early, before they can lead to equipment failure and downtime.

The tasks your field operators perform are critical – they provide the insights managers need to optimize operations, ensure worker safety, extend asset lifecycles, and improve plant performance.

CHALLENGES

Unfortunately, the true value of operator rounds eludes many industrial businesses because most field activities are paper-based. Technicians manually record their observations on a piece of paper or printout, transferring the data to a computer upon returning to the office. In addition to being inefficient, this process leads to missed equipment checks and errors – and a host of other challenges:

No centralized data that can be accessed in real time by any worker, when and where they need it.

Without system visibility, it is **hard to locate technicians in the field** and validate who is doing what, and whether a task has been executed.

Field observations are often **not completely captured**, which hinders communication and collaboration across teams.

Existing workflows make it **difficult to run extended process analytics** and gain insights to drive operational improvements.

Inability to report issues as they arise prevents the initiating of timely corrective actions.

Honeywell Forge Inspection Rounds

Honeywell Forge Inspection Rounds is a cloud solution for field operations that drives enterprise profitability at manufacturing and services companies. It empowers you to deploy nimble and dynamic strategies in the field – while enabling higher uptime and better data-driven decisions through insights from superior analytics.

Inspection Rounds is an out-of-the-box mobile solution for in-house or field technicians to manage their daily operator rounds. It replaces your manual and paper-based processes with standardized digital and automated processes, seamlessly connecting and orchestrating field operations across all touchpoints in the plant.

Best of all, Inspection Rounds is designed to work on any mobile device, computer, or smart wearable, regardless of OS – enabling you to maximize your existing IT investments.

BUSINESS BENEFITS

Increase the productivity, speed, and accuracy of operator rounds

Validate and track activities in the field in real time

Eliminate error-prone manual data entry and inefficiencies from paper-based field activity

Increase operational safety and performance of plant assets

Ensure workers are productive, connected, safe, and informed

Reduce costs and unplanned downtime with early detection of equipment failures

Improve field worker knowledge and awareness of their environment

Ensure compliance with proper documentation across the workforce

Are Your Inspection Rounds Giving Your Business What It Needs to Be Safer and More Profitable?

Contact us to schedule a demo and see how Inspector Rounds can digitize and transform your field inspections, helping you achieve your operational goals.
